

ABSTRACT OF THE DISCLOSURE

5 A cleaning system for swimming pools includes a recirculating
pump system which has a suction inlet and a water outlet. A suction return
is located in the pool; and the suction return is connection to the suction inlet
of the recirculating pump system. In-floor cleaning heads are located
adjacent the ends of the pool and operate in a 360° circle to sweep the
bottom of the pool and place debris in suspension. Intermediate the 360°
10 rotatable heads, between the ends of the pool and the suction return,
cleaning heads which sweep in substantially a 180° arc are directed toward
the suction return to move debris toward the suction return for removal by the
recirculating pump system.
